

## **Abstract**

A power supply guide device of a computer host is provided as a connection structure between a power supply and a computer case. The power supply guide device comprises a computer case and a power supply placement device.

- 5      A first guide device is provided on the horizontal plane of the computer case. A first pivotal portion and a second pivotal portion are located at the upper end and the lower end of the vertical plane of the computer case, respectively. The power supply placement device has a space for placing the power supply. A first fastening device above the power supply placement device is fastened with
- 10     the first guide device. The first pivotal device and the second pivotal device are respectively connected with the first pivotal portion and the second pivotal portion so that the power supply placement device can be pivotally connected with the computer case.
